

Night Peace

- a service from myJoice CARE

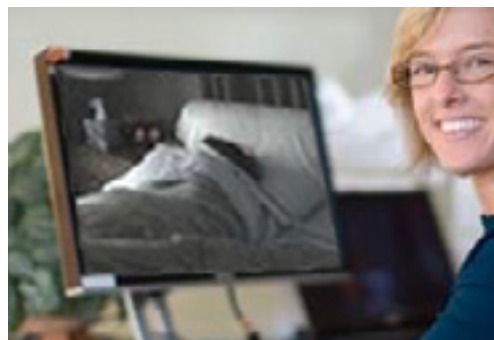

Feeling secure

Night Peace is a service for users, who need supervision or additional care and security in their homes. Night Peace creates closeness, security and safety for users around the clock. With Night Peace, supervision can be done with greater safety and more frequently.

Night supervision takes place today through physical visits – night patrols - which can be disturbing or insufficient for many residents.

How Night Peace works

For the care provider the service means more time and resources to increased and qualitative care. One or more motion-sensitive cameras - who also work in complete darkness - is mounted in various locations in the home. Users and providers agree on how the proposed monitoring is arranged.

Wherever the care provider is, the alarm will send a message and you can in a few seconds make a qualified decision on what action is needed for example a physical visit. The caregiver can see what happened from the alarm went to the present.

Safety

Supervision of Night Peace is safe. Usually, healthcare providers on the road, at night and in all types of weather can be both unsafe and insecure. With Night Peace, it is safe and it is not weather dependent. All supervision is done with the eligibility and registration for each login. Care recipients may also call the service *Near - TV phone*.

Strengths

- More effective use of resources
Provides increased care quality
- Provides increased safety and security for the care recipient and caregiver
- Environmentally friendly

The service includes

Motion-sensitive camera
Software for health care providers installed on any PC

Other services
